

Quad

illuminator

Introducing the Quad Illuminator, a contemporary new concept in the way we produce light. The Quad Illuminator is made from solid brass extrusion and is polished chrome plated for a luxurious look. The light source is contained within the polished chrome extrusion, and emits its colour changing effect between two layers of *Swarovski Strass* crystal, that is world renowned for a quality and sparkle effect. The light source is an RGB colour changing strip light - the ultimate in colour changing effect - and is controlled via the supplied RF remote control.

The owner has the ability to alter the colour changing effect and even pause on their favourite colour. The Quad Illuminator is wire suspended to give you that floating effect and wow factor.

The Quad Illuminator is available in the following sizes:

RGB 250mm², 350mm², 450mm², 550mm²

You also have the option to use our high power white LED if you don't want the colour changing effect.

200mm², 300mm², 400mm², 500mm²

Quad illuminator complete with:

'Light and crystal were made for one another. The full beauty of crystal is only revealed by light. Only crystal can make the beauty of light visible and ignite a firework display of colors.'

CHAMELEON 
RF REMOTE

Slim line stand alone RGB colour controller with RF remote controller to suit LED strip lights. Multiple colour controls. 11 mode colour changing functions, pause and speed controls. The remote has a working distance of 50 metres.
