

Berlin

Post Top

Description

The BERLIN LED Exterior Post Top Light brings classic styling together with the efficiency of integrated LED technology. Its traditional lantern-inspired design makes it an excellent choice for garden paths, driveways, parks and landscaped outdoor spaces where lasting style matters.

Designed to sit neatly on a 60mm diameter post, the BERLIN creates a welcoming pool of warm light that helps define pathways and outdoor areas while adding character after dark. Its clean lines and timeless appearance suit both heritage-inspired homes and more traditional landscape designs. Constructed from durable powder coated aluminium in a black finish, this fitting is built to handle Australian outdoor conditions while maintaining its refined appearance. Available in 30W, 45W and 60W options, it provides flexibility for a wide range of residential and commercial lighting applications.

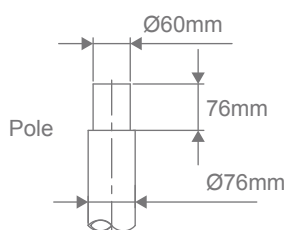

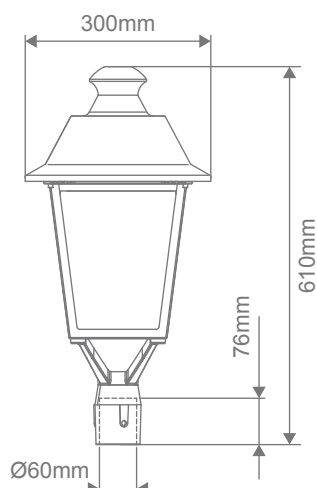

For the best visual effect and light distribution, the BERLIN is recommended for installation on posts 2 metres or higher.
